The compound can be used for treating patients suffering from haematological disorders and thrombocytopenia resulting from chemotherapy, radiation therapy or bone marrow transfusions. The peptide may also be used to maintain the proliferation and growth of TPO-dependent cell lines and for use in biological research, for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Thrombopoietin receptor-binding/activating peptide(s) and peptide mimetic(s) - useful in treatment of haematological disorders, esp thrombocytopenia resulting from chemotherapy, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAW09494 standard;

                                                                                       The present sequence is a compound which binds to thrombopoietin (TPO) receptor (TR). It has a molecular weight of < 8000 Da, and a binding affinity to TR as expressed by an IC50 of no more than about 100 mum. Th compound (especially if modified, see features table) can be used for treating patients suffering from haematological disorders and thrombocytopenia resulting from chemotherapy, radiation therapy or bone marrow transfusions. The peptide may also be used to maintain the proliferation and growth of TPO-dependent cell lines and for use in biological research, for detecting TPO receptors on living cells

                                                                                                                                                                                                                                                                            The present peptide, which binds the thrombopoietin receptor (TR), can be used to treat disorders which are susceptible to treatment with a thrombopoietin agonist, preferably haematological disorders and thrombocytopaenia resulting from chemotherapy, radiation therapy or bone marrow transfusions. It can also be used diagnostically, e.g. to investigate the mechanism of thrombopoietin signal transduction and receptor activation, or to maintain the proliferation and growth of thrombopoietin dependent cell lines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAW36645

                                                                                                                                                                                                                                                                                                                           Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that CC bind to and activate the human thrombopoietin receptor (TPO-R). Methods CC of activating thrombopoietin receptors in cells comprise contacting the cells with effective amounts of peptides and peptide mimetics attached to hydrophilic polymers. The methods are used to treat thrombocytopenia such CC as that due to chemotherapy, radiation therapy or bone-marrow CC transplantation and to prevent thrombocytopenia in patients at risk. The sequences are used to treat and prevent haematological disorders CC including thrombocytopenia and platelet disorders. They are used in vitro CC including thrombocytopenia and platelet disorders. They are used in vitro CC including thrombocytopenia and platelet disorders. They are used in vitro CC including thrombocytopenia and platelet disorders. They are used in vitro CC including thrombocytopenia and platelet disorders. They are used in vitro CC including thrombocytopenia and platelet disorders. They are used in vitro CC including thrombocytopenia and platelet disorders. They are used in vitro CC including thrombocytopenia and platelet disorders. They are used in vitro CC including thrombocytopenia and platelet disorders. They are used in vitro CC in purified or natural biological fluids, in tissue homogenates, and CC in purified or natural biological materials. They may also be used for in situ staining, fluorescence-activated cell sorting, Western blotting and CC in sugme-linked inmunosorbent assay (ELISA). In addition, the peptides can be used for in vitro expansion of megakaryocytes and their committed CC progenitors alone or in conjunction with additional cytokines
                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                             Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that CC bind to and activate the human thrombopoietin receptor (TPO-R). Methods CC of activating thrombopoietin receptors in cells comparise contacting the Cells with effective amounts of peptides and peptide mimetics attached to the distribution of the methods are used to treat thrombocytopenia such CC as that due to chemotherapy, radiation therapy or bone-marrow transplantation and to prevent thrombocytopenia in patients at risk. The CC including thrombocytopenia and platelet disorders. They are used in vitro CC including thrombocytopenia and platelet disorders. They are used in vitro CC as unique tools for understanding the biological role of thrombopoietin CC (TPO) and to develop other compounds that bind to and activate the TPO cells and fixed cells, in biological fluids, in tissue homogenates, and CC in purified or natural biological fluids, in tissue homogenates, and CC situ staining, fluorescence-activated cell sorting, Western blotting and cenzyme-linked immunosorbent assay (ELISA). In addition, the peptides can be used for in vitro expansion of megakaryocytes and their committed committed committed or in conjunction with additional cytokines

(1) can have antiinflammatory, antitumour, immunosuppressive, cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological, antianaemic, anorectic, antiinfertility, haemostatic, dermatological and neuroprotective activities. (1) can be used as a therapeutic or prophylactic agent as well as for screening purposes. (1) is useful for diagnosing diseases characterised by dysfunction of their associated protein of interest, for identifying normal or abnormal proteins of interest, as a part of diagnostic kit to detect the presence of their proteins of interest in a biological sample. Additionally, (1) is useful for treating inflammatory and autoimmune diseases, tumour growth, cancer, rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders, infertility, and neurological degenerative diseases (1), comprising EPO-mimetic compounds are useful for treating disorders characterised by low red blood cell levels such as anaemia. The TPO-mimetic comprising compounds are useful for treating conditions that involve an existing megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet deficiency and aplastic anaemia, metastatic tumour which result in thrombocytopaenia, systemic lupus erythematosus, and reacted and nucleic acid sequences used in the

                                                                                                                                                                                                                                                                                                                                                                                              ligand binding region (IBR). The present invention describes human mimetibodies, including modified immunoglobulins and cleavage products that can be useful in gene therapy and the generation of transgenic plants and animals. Furthermore, the CDR mimetibody is useful for preparing compositions for modulating, treating or reducing the symptoms of immune, cardiovascular, infectious, malignant and/or neurologic diseases, as well as anaemia. Accordingly, they exhibit immunomodulator, cardiant, antimicrobial, cyrostatic and neuroprotective activities. This peptide sequence is a TPO mimetic peptide sequence used to make a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to novel mammalian CDR mimetibodies, specific portions or variants thereof. Specifically, it refers to an antibody fragment where a protein has been inserted into, or replaces a portion of, one or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain or light chain variable region, which itself comprises at least one human framework region and at least one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       mimetic; CDR mimetibody; gene therapy; transgenic; immune; cardiovascular; infectious; malignant; neurologic disease; anaemia; immunomodulator; cardiant; antimicrobial; cytostatic; neuroprotective;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New CDR mimetibody comprising a portion of a heavy or light chain variable region comprising human framework or ligand binding region, useful for preparing a composition for treating e.g., immune, cardiovascular or neurologic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             06-MAY-2004

which encode them, compositions, methods and uses. International Compositions and uses. International Compositions and uses. International Composition and the development of compounds with an immunosuppressive, cardiovascular, cardiant, hypotensive, neuroprotective, nootropic, cantibacterial, virucide or fungicide activity. In addition, the disclosed sequences may prove useful for gene therapy. The CHI-deleted mimetibody is useful for diagnosing or treating a disease condition in a cell, ctissue, organ or animal, specifically for modulating, treating, cardiovascular (for example arrhythmia, hypertension or heart commune, cardiovascular (for example arrhythmia, hypertension or heart commune, cardiovascular (for example arrhythmia, hypertension or heart commune), or neurodegenerative (for example multiple sclerosis, dementia conditions, or infectious diseases or disorders, anaemia, cancerous conditions, or infectious diseases (for example bacterial, viral or fungal infection). The present sequence is that of a peptide which may be used during the creation of a mimetibody of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present peptide binds the thrombopoietin receptor (TR), has a molecular weight of less than 8000 Da and a TR binding affinity as expressed by an IC50 of no more than about 100 microM. It can be used to treat disorders which are susceptible to treatment with a thrombopoietin agonist, preferably haematological disorders and thrombocytopaenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                               resulting from Chemotherapy, radiation therapy or bone marrow transfusions. It can also be used diagnostically, e.g. to investigate the mechanism of thrombopoietin signal transduction and receptor activation, or to maintain the proliferation and growth of thrombopoietin dependent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Peptides and peptide mimetics which bind to and activate the thrombopoietin receptor - useful in treatment of haematologi disorders, esp. thrombocytopenia resulting from chemotherapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              haematological disorder; thrombocytopaenia; chemotherapy; radiation therapy; bone marrow transfusion; diagnosis; signal transduction; receptor activation; cell culture.

The invention discloses a variant of an immunoglobulin (Ig) variable CC heavy or light chain domain that comprises at least one complementarity CC determining region (CDR) and framework regions flanking the CDR. The CDR also has added or substituted to it, at least one binding sequence which CC is heterologous to the CDR and is an antigenic, agonistic sequence from a CC thrombopoietin (TPO) receptor binding sequence. The antigenic sequence can be a binding sequence heterologous to the CDR, a cytotoxic T-CC lymphocyte (CTL)-epitope sequence, a T-helper cell sequence, a B-helper Cell sequence or a combination of each. The variant or thrombopoietin CC synthebody, pharmaceutical and vaccine compositions are useful for CC stimulating proliferation, growth or differentiation of haematopoietic CC cells, particularly platelet progenitor cells. The variants are also useful for treating or preventing haematopoietic or immune disorders cresulting from chemotherapy, radiation therapy, or bour marrow CC transfusions (e.g. thrombocytopenia or disseminated intravascular CC computation, amplification and ex vivo expansion of stem cells and CC committed precursor cells for autologous and allogeneic transplantation can swell as for the expansion of stem cells for studying the also useful as diagnostic or analytical reagents for studying the contained within the immunoglobulin CDR consensus variable heavy contained within the immunoglobulin CDR consensus variable heavy
                                                                                                           Best Loc

                                                                                                                                                           The invention relates to peptide compounds composed of two peptide chains CC attached to each of the amino groups of a single Lys in the amide form. CC The compounds are of formula (Pept) (Pept) K(NH2), where Pept is of CC formula: X1.1-E-X2.P-T-L-X3.Y4.Y5-L-X6.X7-X8-X9-X10; and pept is of CC formula: X1.1-E-X2.P-T-L-X3.Y4-X5-L-X6-X7-X8-X9-X10; and pept is of CC acetyllysine; X4 = Gln or Glu; X5 = Trp, L-1-naphthylalanine or Phe; X6 = CC Ala, 5-aminopentanoic acid or 2-aminobutyric acid; X7 = Ala, N-dipentylalanine, or is absent; X8 = Arg, P-amino-phenylalanine, N-CC acetyl-lysine, or is absent; X9, X9' = Ala, beta Ala, N-methyl-alanine, CC are capable of binding to, and activating, the thrombopoietin (TPO) CC receptor. They may be used in vitro as tools for understanding the CC biological role of TPO. They may be used as competitive binders in assays to screen for new TPO receptor agonists. They may be used as reagents for CC detecting TPO receptors in living cells, biological fluids, etc. They may be used to maintain growth and proliferation of TPO-dependent cells and CC for in vitro expansion of megakaryocytes. They may be used to activate TPO receptors in vivo, e.g., to treat blood disorders or thrombocytopaenia associated with bone marrow transfusions, radiotherapy or chemotherapy. The present sequence represents a specific example of CC (Pepl)K(NH2)

                                                                                               밁
                                                                                                                                                                                                                                                                   The present invention describes composition of matter (I) comprising an CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is: CC (L1)a-F1-(K2)b, where: F1 = an Fc domain; X1 and X2 = are each CC (independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-CC (L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, CC (P3, and P4 = are each independently sequences of pharmacologically active CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, CC c, d, e, and f = are each independently 0 or 1, provided that at least 1 CC of a and b is 1. The composition can have cytostatic, antiasthmatic, CC cells from the present invention can be used for producing pharmaceutical CC compositions. The compositions are useful for treating cancer, asthma, CC a fab domain) can provide a longer half-life or incorporate functions CC a Fab domain) can provide a longer half-life or incorporate functions CC a seam; local transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the
                                                                                                                                                            Matches
                                                                                                                                                                               Best
                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VBGF; immunosuppressive; EPO; CTLA4; mimetic; IL-1; TWF; antagonist; MMP; inhibitor; erythropoietin; thrombopoietin; interleukin 1; cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase; asthma; vascular endothelial growth factor; matrix metalloproteinase;

                                                                                                                                                                        RESULT 17
                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to novel mammalian CDR mimetibodies, specific CC portions or variants thereof. Specifically, it refers to an antibody CC fragment where a protein has been inserted into, or replaces a portion CC of, one or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain or light chain variable region, which CC itself comprises at least one human framework region and at least one CC itself comprises at least one human framework region and at least one CC itself comprises at least one human framework region and at least one CC itself comprises at least one human framework region and at least one CC itself composition (LBR). The present invention describes human CC mimetibodies, including modified immunoglobulins and cleavage products CC that can be useful in gene therapy and the generation of transgenic CC plants and animals. Furthermore, the CDR mimetibody is useful for CC preparing compositions for modulating, treating or reducing the symptoms CC immune, cardiovascular, infectious, malignant and/ or neurologic CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator, CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This competites sequence is a TPO mimetic peptide sequence used to make a
                                                                                                                                                                                                                                                                                            Best Loc

Accordingly, they exhibit immunomodulator, cardiant, antimicrobial, cytostatic and neuroprotective activities. This peptide sequence is a TPO mimetic peptide sequence used to make a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to novel mammalian CDR mimetibodies, specific portions or variants thereof. Specifically, it refers to an antibody fragment where a protein has been inserted into, or replaces a portion of, one or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain or light chain variable region, which itself comprises at least one human framework region and at least one ligand binding region (LBR). The present invention describes human mimetibodies, including modified immunoglobulins and cleavage products that can be useful in gene therapy and the generation of transgenic plants and animals. Furthermore, the CDR mimetibody is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New CDR mimetibody comprising a portion of a heavy or light chain variable region comprising human framework or ligand binding regionseful for preparing a composition for treating e.g., immune, cardiovascular or neurologic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WO2003084477-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cardiovascular; infectious; malignant; neurologic disease; anaemia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                portions or variants thereof. Specifically, it refers to an antibody fragment where a protein has been inserted into, or replaces a portion of, one or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain or light chain variable region, which itself comprises at least one human framework region and at least one ligand binding region (LDR). The present invention describes human mimetibodies, including modified immunoglobulins and cleavage products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      diseases, as well as anaemia. Accordingly, they exhibit cardiant, antimicrobial, cytostatic and neuroprotective peptide sequence is a TPO mimetic peptide sequence used mimetibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   that can be useful in gene therapy and the generation of transgenic plants and animals. Furthermore, the CDR mimetibody is useful for preparing compositions for modulating, treating or reducing the symptoms of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic of immune, cardiovascular, infectious, malignant and or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or neurologic or 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New CDR mimetibody comprising a portion of a heavy or light chain variable region comprising human framework or ligand binding region, useful for preparing a composition for treating e.g., immune,
                                                                                                                                                                                                                                                 fungicide; gene therapy; immune disorder; cardiovascular disease; arrhythmia; hypertension; heart failure; neurodegenerative; multiple sclerosis; dementia; Alzheimer's disease; anaemia; cancerous condition; infectious disease; bacterial infection;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ঠ
CC which encode them), compositions, methods and uses. The invention may be cc useful for the development of compounds with an immunosuppressive, CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic, CC antibacterial, virucide or fungicide activity. In addition, the disclosed CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody CC is useful for diagnosing or treating a disease condition in a cell, CC tissue, organ or animal, specifically for modulating, treating, CC alleviating, preventing the incidence or reducing the symptoms of an CC immune, cardiovascular (for example arrhythmia, hypertension or heart CC failure), or neurodegenerative (for example multiple sclerosis, dementia CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous CC conditions, or infectious diseases of for example bacterial, viral or CC fungal infection). The present sequence is that of a peptide which may be used during the creation of a mimetibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to CHI deleted mimetibodies (and the DNA sequences which encode them), compositions, methods and uses. The invention may be cuseful for the development of compounds with an immunosuppressive, cardiovascular, cardiant, hypotensive, neuroprotective, nootropic, antibacterial, virucide or fungicide activity. In addition, the disclosed sequences may prove useful for gene therapy. The CHI-deleted mimetibody is useful for diagnosing or treating a disease condition in a cell, tissue, organ or animal, specifically for modulating, treating, treating, alleviating, preventing the incidence or reducing the symptoms of an immune, cardiovascular (for example arrhythmia, hypertension or heart failure), or neurodegenerative (for example multiple sclerosis, dementia conditions, or infectious diseases (for example bacterial, viral or fungal infection). The present sequence is that of a peptide which may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Best Loc

In addition, the disclosed sequences may prove useful for gene therapy. The CH1-deleted mimetibody is useful for diagnosing or treating a disease condition in a cell, tissue, organ or animal, specifically for modulating, treating, alleviating, preventing the incidence or reducing the symptoms of an immune, cardiovascular (for example arrhythmia, hypertension or heart failure), or neurodegenerative (for example multiple sclerosis, dementia or Alzheimer's disease) diseases of disorders, anaemia, cancerous conditions, or infectious diseases of cardiovascular, viral or fungal infection). The present sequence is that of a peptide which may be used during the creation of a mimetibody of the invention.
                                                                                                                                                                            dermatological-Gen; auditory; endocrine-Gen; gastrointestinal-Gen; gynaecological-Gen; hepatotropic; haemostatic; immunomodulator; antiallergic; muscular-Gen; cytostatic; antialflammatory; neuroleptic; ophthalmological; nephrotropic; respiratory-Gen; tumour necrosis factor; TNF; cytokine; bone disorder; joint disorder; cardiovascular disorder; NF; cytokine; bone disorder; dermatological disorder; ear disorder; nose disorder; oral disorder; dermatological disorder; ear disorder; nose disorder; throat disorder; endocrine disorder; metabolic disorder; gynaecological disorder; hepatic disorder; obstetric disorder; haematologic disorder; immunological disorder; neurological disorder; immunological disorder; ophthalmologic disorder; pediatric disorder; psychiatric disorder; renal disorder; pulmonary disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New CH1-deleted mimetibody polypeptides and nucleic acids, useful for modulating, treating, alleviating, preventing an immune, cardiovasculor neurodegenerative disease or disorder, anemia, cancer, or infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 2; SEQ ID NO 460; 129pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC gastrointestinal-Gen, gynaecological-Gen, hepatotropic, haematatic, CC immunomodulator, antiallergic, muscular-Gen, cytostatic, CC antiinflammatory, neuroleptic, ophthalmological, nephrotropic or CC respiratory-Gen activity acting as a tumour necrosis factor (TNF)-CC modulator or cytokine-agonist. The methods and compositions of the CC present invention are useful for the diagnosis, prevention and/or CC crativity of the CH1 deleted mimetibody, such as a bone or joint, CC cardiovascular, dental or oral, dermatological, ear, nose or throat, CC cardiovascular, dental or oral, dermatological, ear, nose or throat, CC contocrine, metabolic, gastrointestinal, gynaecological, hepatic, CC obstetric, haematological, immunological, allergic, infectious, consciological, nocological, neurological, nutritional, ophthalmologic, pediatric, psychiatric, renal or pulmonary disorders. The present CC generice is that of a peptide which may be used during the creation of a mimetibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to novel mammalian CDR mimetibodies, specific portions or variants thereof. Specifically, it refers to an antibody fragment where a protein has been inserted into, or replaces a portion of, one or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain or light chain variable region, which itself comprises at least one human framework region and at least one ilgand binding region (LBR). The present invention describes human mimetibodies, including modified immunoglobulins and cleavage products that can be useful in gene therapy and the generation of transgenic that can be useful in gene therapy and the generation of transgenic preparing compositions for modulating, treating or reducing the symptoms of immune, cardiovascular, infectious, malignant and/or neurologic cardiant, antimicrobial, cytostatic and neuroprotective activities. Specifically, it refers to an antibody fragment where a protein has been inserted into, or replaces a portion of, one or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain or light chain variable region, which itself comprises at least one human framework region and at least one light diding region [LBR]. The present invention describes human mimetibodies, including modified immunoglobulins and cleavage products that can be useful in gene therapy and the generation of transgenic plants and animals. Furthermore, the CDR mimetibody is useful for preparing compositions for modulating, treating or reducing the symptoms of immune, cardiovascular, infectious, malignant and/or neurologic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New CDR mimetibody comprising a portion of a heavy or light chain variable region comprising human framework or ligand binding region, useful for preparing a composition for treating e.g., immune, cardiovascular or neurologic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        diseases, as well as anaemia. Accordingly, they exhibit immunomodulator, cardiant, antimicrobial, cytostatic and neuroprotective activities. This peptide sequence is a TPO mimetic peptide sequence used to make a mimetibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; SEQ ID NO 464; 97pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Synthetic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC which encode them), compositions, methods and uses. The invention may be CC useful for the development of compounds with an immunosuppressive, CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic, CC antibacterial, virucide or fungicide activity. In addition, the disclosed CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody CC is useful for diagnosing or treating a disease condition in a cell, CC tissue, organ or animal, specifically for modulating, treating, CC tissue, organ or animal, specifically for modulating, treating, CC immune, cardiovascular (for example arrhythmia, hypertension or heart CC failure), or neurodegenerative (for example multiple sclerosis, dementia CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous CC conditions, or infectious diseases or disorders, anaemia, cancerous CC or Michiner or infectious diseases or disorders, anaemia, cancerous CC conditions, or infectious diseases or disorders, anaemia, cancerous CC conditions, or infectious diseases or disorders, anaemia, cancerous CC conditions, or infectious diseases or disorders, anaemia, cancerous CC conditions, or infectious diseases if or example bacterial, viral or CC cused during the creation of a mimetibody of the invention.

antiinflammatory, neurolaptic, ophthalmological, nephrotropic or respiratory-Gen activity acting as a tumour necrosis factor (TMP)-modulator or cytokine-agonist. The methods and compositions of the present invention are useful for the disgnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CH1 deleted mimetibody, such as a bone or joint, cardiovascular, dental or oral, dermatological, ear, nose or throat, endocrine, metabolic, gastrointestinal, gynaecological, hepatic, obstetric, haematologic, immunological, allergic, infectious, musculoskeletal, oncological, neurological, nutritional, ophthalmologic, pediatric, psychiatric, renal or pulmonary disorders. The present sequence is that of a peptide which may be used during the creation of a mimetibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antiallargic; muscular Gen; cytostatic; antiinflammatory; neuroleptic; ophthalmological; nephrotropic; respiratory-Gen; tumour necrosis factor; TNF; cytokine; bone disorder; joint disorder; cardiovascular disorder; dental disorder; oral disorder; dermatological disorder; ear disorder; nose disorder; throat disorder; endocrine disorder; metabolic disorder; gastrointestinal disorder; gynacological disorder; hepatic disorder; obstetric disorder; haematologic disorder; immunological disorder; allergic disorder; infectious disorder; musculoskeletal disorder; infectious disorder; musculoskeletal disorder;
                                                                                                                                                                                                                                                                                                        which encode them), compositions, methods and uses. The invention mauseful for the development of compounds with an osteopathic, cardiovascular-den, dermatological-den, auditory, endocrine-den, gastrointestinal-den, gynaecological-den, hepatotropic, haemostatic, immunomodulator, antiallergic, muscular-den, cytostatic, antiallergic, muscular-den, cytostatic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New CH1 deleted mimetibody polypeptide and nucleic acid, useful for diagnosing, preventing or treating cardiovascular, dermatologic, endocrine, gastrointestinal, gynecologic, infectious, neurologic and nutritional disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      oncological disorder; neurological disorder; nutritional disorder; ophthalmologic disorder; pediatric disorder; psychiatric disorder;

                                     conditions involving a megakaryocyte and/or platelet deficiency, e.g. CC disease conditions involving thrombocytopaenia such as aplastic anaemia, CCC autoimmune thrombocytopaenia, drug induced immune thrombocytopaenia. CCC maintaining the ribbility or storage life of platelets and/or CCC maintaining the viability or storage life of platelets and/or CCC megakaryocytes and its derived cells. The compounds demonstrate an CCC improved ability to bind to and/or trigger transmembrane signal through, CCC i.e. activating, the mpl receptor the compounds demonstrate an CCC thrombopoletic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity. CCC i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity. CCC platelet precursors. Further, certain of the compounds also exhibit CCC superior therapeutic properties, such as improved plasma half-life, CCC represents a preferred TMP of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a thrombopoietin mimetic peptide (TMP) (I) that binds to the c-mpl (mpl) receptor, and which stimulates the production or platelets and/or the production of platelets precursors, is new. Further disclosed is a composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition comprising (II) and a carrier. The pharmaceutical composition of the invention is useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                thrombocytopaenia in an animal, and for increasing megakaryocytes or platelets in a patient. The TMP of the invention is useful for treat:
